

ATOMIC JOLT

ATOMIC CURRICULUM TOOLS

A better way to organize your Canvas content.

NEST YOUR MODULES.

With ACT, navigation and content management are simplified with a Google-Drive™-like experience that students and teachers easily understand. Organize your content with nested modules and search simply within those modules.

IMPROVED USER EXPERIENCE.

Use the visually appealing grid navigation to present modules. Nest content in folders for an intuitive user experience. Plus, easily upload images to represent modules to improve the visual navigation experience of your students.

THIS WAS YOUR PLACE.

ACT saves time (and frustration) by remembering where in the content the student left off and returns them there when they return.

FOR YOUR EYES ONLY.

Use ACT to publish content for teachers alongside student content. Mark teacher content as “private” to prevent it from accidentally being published when you publish modules.

COMMAND YOUR CONTENT.

The Canvas modules page displays modules and content on a single screen and may present a barrier to learning for students.

SHARE YOUR WORK.

Share course content and tools with an email link. Following the link lets you import the content and install tools it depends on into a Canvas course in one simple step.

Keep it Simple.

Atomic Jolt develops powerful solutions that make teaching and learning more enjoyable and effective. Simple solutions for complex problems—and so easy to use you’ll wonder how you’ve lived without them.

Our Services.

Our products and professional services include Apps for Canvas, LMS hosting, and custom development work for Universities and EdTech companies of all sizes.
